AB - JP2002266285 NOVELTY - A paper coating agent contains 100 mass parts of polyvinyl alcohol group resin, 0.01-3 mass parts of a water-soluble boron compound and 0.1-25 mass parts of a water-soluble cellulose derivative and/or starch derivative having viscosity of more than 30 mPa.second at 25 deg. C in 1 mass% aqueous solution.
- DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for manufacture of coated paper which involves coating above paper coating agent on a base paper surface and drying.
- USE - For manufacture of coated paper (claimed).
- ADVANTAGE - The paper coating agent has excellent surface strength, barrier property and high-speed coating property. The coating agent prevents adhesion of stain, improves workability, reduces coating loss of release agent such as silicone resin, and has high industrial utility. The coating agent is inexpensive.
